

General Care Instructions for Microestil Microcement

1. **Keep the surface clean:** Microestil Microcement is a durable and long-lasting material, but it still requires regular cleaning to keep it in good condition. Use a soft cloth or mop with warm water and a mild detergent to clean the surface. Avoid using abrasive cleaners, as they can scratch the surface.
2. **Protect the surface from heat and moisture:** Although Microestil Microcement is resistant to water and heat, it's still better to avoid prolonged exposure to these elements. Use coasters or trivets for hot pots and pans, and wipe up spills immediately.
3. **Avoid sharp or heavy objects:** Microestil Microcement is a thin layer that can be scratched or dented by sharp or heavy objects. Avoid dragging heavy furniture across the surface, and use protective pads under furniture legs to prevent scratches.
4. **Seal the surface periodically if required:** Depending on the level of traffic, your Microestil Microcement may require periodic resealing to maintain its durability and appearance. If you start to see a difference in appearance in high traffic areas, contact your applicator and follow the manufacturer's instructions for re-sealing the surface.
5. **Be cautious with chemicals:** Avoid using harsh chemicals or abrasive cleaners on the surface of Microestil Microcement, as they can damage the finish. Use gentle cleaners

Following these care instructions can keep your Microestil Microcement surface looking great for years to come.
